

JunkYard Dog Industries Completes Third Party Testing on SideWinder

JYD ANNOUNCES TESTING COMPLETED ON *SIDEWINDER* JACK SYSTEM DEVELOPED FOR FAST AND STURDY STABILIZATION AND LIFTING MOTOR VEHICLES

Horsham, PA (January 11, 2011) JunkYard Dog Industries, a division of ESI Equipment, Inc. today announced the completion of third party testing on the SideWinder Stabilization and Lifting Mechanical Jack. JunkYard Dog Industries is an international distributor of emergency services products through numerous distributors. This product called the *SideWinder* was designed for use on automobiles and light duty trucks.

“By completing this third party testing, rescuers can be confident that JunkYard Dog Industries strives to achieve a standard of excellence in all of our products” says John Evans, President of ESI Equipment/JunkYard Dog Industries.

The SideWinder was subjected to numerous compression tests at various heights to determine exact load and force capabilities at Lehigh Testing Laboratories, Newark, DE. Other testing included force generating lifts at various heights using a number of manual and powered devices.

As a result of the testing, new decals were developed to provide the rescuer the Working Load Limits at various heights throughout the stabilization/lifting process. The unique color coded graphic follows the lifting sequence allowing the user to quickly determine the WLL by the corresponding chart on the base.

“We thought it would be of great importance to permit the rescuer to know while lifting what the working load limits are.” says Evans. “The good news is that a 2:1 safety factor is maintained throughout the power range”.

The *SideWinder* is rated to hold between 2,000 and 7,500 pounds WLL and is tested to over twice the limit. The testing confirms that the designed purpose of stabilizing and lifting a passenger car or light duty truck stands true. The recommended use of pairs or a system of four provides the most stable platform.

A positive locking threaded device, the *SideWinder* is very effective and can be used in conjunction with the JYD Rescue Struts for optimal lifts. Weighing just 19 pounds, each *SideWinder* provides eight inches (22 cm) of lift, enough space for safe and affective patient removal. A new optional carry bag is now available.

To locate a retailer for *SideWinder* or to inquire about becoming a distributor of the many JYD products, contact JYD at 1-800-574-8228 or ydinfo@cavtel.net see us at: www.junkyarddogindustries.com.

JunkYard Dog Industries is known for emergency vehicle stabilization and lifting equipment, and a large line of emergency services equipment bags. ESI/JYD is a member of FEMSA and contributes towards the Fallen Firefighters Foundation, F.O.O.L.S. chapters, and Burn Foundation activities.
